Preventive Drug List

Introduction

In addition to a healthy lifestyle, preventive prescription drugs are important in helping people avoid many types of illnesses and complications from illnesses. This book contains a list of the most commonly prescribed preventive prescription drugs. It does not include all conditions that may be prevented with prescription drugs. The prescription drugs listed serve to maintain a person's health status and to avoid acute complications. This list is not all-inclusive and is subject to change.

Important facts about this benefit

- Please refer to your plan documents for coverage on the selected products. Quantity limits, step therapy, prior authorizations and other coverage limitations may apply.
- Quantities are limited to a maximum 3-month supply per fill.
- Tier 3 medications listed on the Security Health Plan Formulary are not routinely placed on the preventive list.
- If a generic equivalent product is available, the originator brand medication will not be covered (Example: simvastatin is covered, ZOCOR is not).
- This list is updated annually on a calendar year basis.

The covered preventive drugs are divided into medication categories. The Diabetic Drugs and Supplies category is further divided into two subcategories labeled "Diabetic List" and "Insulin and Insulin Supply List." Drugs are considered preventive by Security Health Plan when taken by a person who has developed risk factors for a disease that has not yet become clinically apparent (e.g., blood pressure or cholesterol drugs to prevent heart attack or stroke). Drugs for treatment of signs or symptoms of an already existing condition are typically not covered under the preventive prescription drug benefit.

Note: Some plans do not include this preventive drug list and some plans cover the entire preventive drug list, while other plans will only cover select categories within the list. Please refer to your plan documents for information specific to your preventive coverage.
